Amazonia Rising
A Global Summit on Investing in the Amazon
May 24-28, 2021

“The forest is worth more alive and standing than cut and burned, but the right investment opportunities never existed before, until now.”

The Amazon rainforest is critical for global climate stability and its ecological integrity is at risk. Investors, philanthropists, and allies will convene online, this May, to advance forest-friendly economic development and the rule-of-law across the region. With local partners, we will design systems of conservation finance to sustain people and forests.
